

BANK MARKETING CAMPAIGN ANALYSIS REPORT

by Odunola Adewale

1. Introduction

Marketing campaigns are essential tools for banks to attract customers and increase subscription to financial products. However, understanding which customer segments are most likely to respond positively to marketing efforts is critical for maximizing campaign effectiveness and reducing marketing costs.

This report analyzes the Bank Marketing Dataset to evaluate factors driving customer subscription to term deposits. Using **11K** customer records, the analysis focuses on demographics, financial profile, and campaign contact data to identify high-performing segments. The dashboard was built in Power BI to visualize conversion patterns and support data-driven marketing decisions.

2. Business Problem Statement

The bank faces inconsistent conversion rates across customer segments, averaging **47.4%**. With **11K** contacts and limited campaign budget, management needs to know;

- Which customer segments are most likely to subscribe to term deposits.
- How customer demographics and financial characteristics influence conversion rates.
- Whether previous campaign outcomes impact future customer responses.
- Which communication methods generate the highest conversion rates.
- How marketing performance varies across customer groups.

The goal is to provide data-driven recommendations that can improve customer targeting and increase campaign conversion rates.

3. Dataset Description

The dataset contains information collected from direct marketing campaigns conducted by a banking institution.

Key Data Categories

Customer Demographics;

- Age
- Job
- Education
- Marital Status

Financial Information;

- Average Balance
- Housing Loan Status

Campaign Information;

- Contact Type
- Call Duration
- Previous Campaign Outcome

Target Variable;

- Deposit Subscription (Yes/No)

Dataset Summary;

- Total Customers: **11,000+**

- Total Subscribers: **5,289**
- Overall Conversion Rate: **47.4%**
- Average Account Balance: **1.53K**
- Average Call Duration: **372 seconds**

4. Data Analysis Process

The analysis was conducted using Power BI through the following steps:

- Data cleaning and validation.
- Creation of calculated measures such as Conversion Rate, Total Customers, and Total Subscribers.
- Segmentation of customers into age groups and balance categories.
- Development of interactive visualizations to identify conversion patterns across customer segments.
- Comparative analysis of customer demographics, financial status, and campaign performance.

5. Key Findings

- **By Job:** Students convert highest at **74.7%**. Retired at **66.3%**. Blue-Collar lowest at **36.4%**. Gap of **38.3%** points between best and worst segment.
- **By Timing:** March **89.9%** and December **90.9%** show peak conversion. May **32.8%** and November **42.7%** show lowest conversion. Seasonal pattern is clear.
- **By History:** Customers with previous campaign Success convert at **91.3%**. Unknown history converts at only **40.7%**. Past success is strongest predictor.
- **By Duration:** Long calls **>31.6min** account for **77.4%** of conversions vs **22.6%** for short calls.

- **By Balance:** High balance segment converts at **57.2%** vs Negative balance at **30.5%**. Wealth correlates with conversion.

6. Business Insights

- **Segment Insight:** Students (**74.7%**) and Retired customers (**66.3%**) have the highest conversion rates, while Blue-Collar (**36.4%**) and Entrepreneurs (**37.5%**) have the lowest. This suggests marketing efforts should focus more on high-performing customer segments.
- **Timing Insight:** Conversion rates peak in **March (89.9%)** and **December (90.9%)**, but drop significantly in **May (32.8%)** and **November (42.7%)**. Campaign timing has a strong impact on customer response.
- **Behavior Insight:** Customers with a **successful previous campaign outcome** convert at **91.3%**, compared to **40.7%** for those with unknown outcomes. Past engagement is a strong predictor of future subscription behavior.
- **Engagement Insight:** Long calls account for **77.4% of conversions**, while short calls contribute only **31.6%**, indicating that meaningful customer interactions improve conversion success.

7. Recommendations

- **Target High-Converting Segments:** Reallocate campaign resources toward **Students (74.7%)** and **Retired customers (66.3%)**, while reducing spend on lower-performing groups such as **Blue-Collar (36.4%)** and **Entrepreneurs (37.5%)**. A more targeted approach is likely to improve overall campaign efficiency and conversion rates.

- **Improve Call Quality:** Since **long calls generate 77.4% of conversions**, focus on agent training, customer engagement techniques, and consultative selling. Prioritize meaningful conversations over high call volumes.
- **Optimize Campaign Timing:** Increase campaign activity during high-performing months such as **March (89.9%)** and **December (90.9%)**, and reduce marketing spend during lower-performing periods like **May (32.8%)** and **November (42.7%)** to maximize ROI.
- **Implement a Retargeting Strategy:** Create a dedicated campaign for customers with a **previous successful outcome (91.3% conversion rate)**. These customers represent the highest-probability segment and should be prioritized before acquiring new leads.
- **Adopt Lead Scoring:** Use factors such as **account balance, previous campaign outcome, occupation, and loan status** to rank prospects. Prioritizing high-balance and historically responsive customers can improve conversion rates and reduce acquisition costs.

8. Conclusion

The analysis proves conversion is driven by who you call, when you call, and their past behavior. It's not just how many you call. By focusing on Students/Retired segments, optimizing for **Mar/Dec** timing, and retargeting previous Success customers, the bank can lift conversion from **47.4%** to **55%+** while reducing campaign costs. These data-driven actions provide immediate ROI improvement for the next campaign cycle.
